Img.1

#### Historical perspective

Earth is estimated to have formed 4.54 billion years ago from the solar nebula, along with the Sun and other planets.

- The moon formed roughly 20 million years later. Initially molten, the outer layer of the planet cooled, resulting in the solid crust.
- Outgassing and volcanic activity produced the primordial atmosphere.

#### Wilderness

Some Ecologists consider wilderness areas to be an integral part of the planet's self-sustaining natural ecosystem
